Taken by: Dan Joffe

Amp was tested on 4 Ohm tap with 4 Ohm load both channels (tested singly) delivered more than 36 Watts per channel.

It has:

1. Solid state rectifiers in the 5AR4 Tube socket
2. New Updatemydynaco bias board
3. New Feet
4. Power output is good, but tubes are a bit soft. They should be replaced.
5. One of the tubes has its keying feature broken off. Tube and amp works well.
6. We ship in an oversized box filled out with packing foam on all sides.
